Kymanox Means Ideal Knowledge Transfer

Kymanox (ki'-mah-noks') is a diversified organization that helps its clients in the biotechnology, pharmaceutical, and medical device industries achieve their mission-critical objectives. Besides providing contract services, Kymanox also develops and maintains products for use in the same industries, as seen on KymaSTORE.com.

Project Management Training

Kymanox offers a two-day project management training **ideal for professionals with project or product management responsibilities** within the pharmaceutical or biotechnology industries. Course components include:

- The Project Team
- Updating the Target Product Profile
- Developing Project Objectives
- Developing the Project Plan
- Developing the Timeline & Budget
- Project Implementation, Monitoring, & Control
- Transition from Phase III to Commercialization

Course attendees leave with the skills necessary to select the right team, communicate with stakeholders, and create and manage an achievable timeline and budget to **ensure successful transition** from Phase III to Commercialization and **avoid costly delays**.

Technology Transfer Training

Kymanox offers an extensive, **two-day technology transfer training program** for professionals in pharmaceutical, biologics, vaccine, and combination drug-device industries.

The course covers:

- Project Initiation
- Information Exchange
- Planning for Technology Transfer
- Transfer of Materials and Assays
- Process Transfer
- Transfer Verification/Engineering Runs
- Documenting the Transfer and Confirming Success

The specifics, mechanics, and real life industry cases will give you the tools and confidence necessary for **comprehensive planning, effective coordination, and first-time-right execution** of your organization's technology transfer plan.

A Sampling
of Our Clients

- > A biopharmaceutical developer of medicines for inflammatory diseases
- > A consulting company that specializes in FDA compliance
- > A leader in monoclonal antibody applications for treating cancer
- > An OTC drug packager that uses blow-fill-seal technology

Good Manufacturing Practices (GMP) Training

Kymanox cGMP subject matter experts deliver a training package that includes a presentation, training quiz, and answer key that covers the following material:

- High level overview
- Individual and corporate requirements
- Agency perspectives
- International Conference on Harmonization (ICH)
- Regulatory inspections
- Audit readiness
- Impact of non-compliance
- Responsibility for cGMPs

Training results in an **awareness of current Good Manufacturing Practices** as applicable in the pharmaceutical and biotechnology industries.
