

Get projects done.

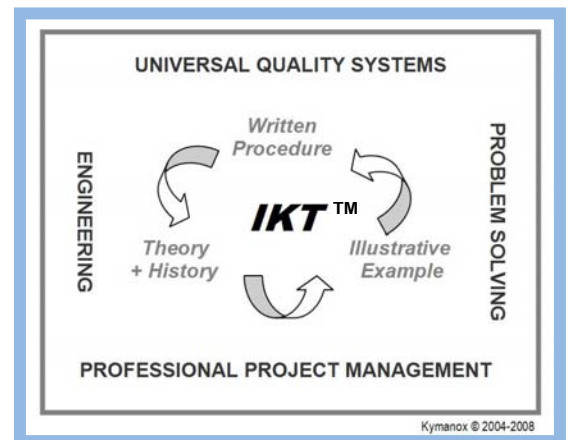

Kymanox Technical Project Management Services

Ideal Knowledge Transfer™ (IKT™)

Kymanox uses *Ideal Knowledge Transfer™ (IKT™)* to help organizations achieve **predictable project success**. *IKT™* is a continuously improving concept that builds on the following existing principles and disciplines:

- Professional **Project Management**
- Fundamental **Engineering Practices**
- Universally Recognized **Quality Systems**
- Formal **Problem Solving Methods**

The path to predictable success starts with **planning and understanding**; more effort is exerted in the early phases so that later phases benefit. In spending more time and effort on knowledge transfer, organizations are more likely to have efficient, first-time successes that can serve as a foundation for future successes.

Technical Project Management and Control

Whether a project needs a **full-time PM and technical staffing** – or just an extra resource to keep things on-track and well-documented – Kymanox can help. In addition to providing **professional-grade** project management services, Kymanox is equipped to delve into and help solve complex technical, engineering and quality issues. Kymanox is experienced in managing and providing technical services on a wide variety of projects:

- **Biotechnology, Pharmaceuticals, and Medical Devices**
- **New Technology, Scale-up, and Technology Transfer**
- **Design, Installation, Commissioning, Validation, and Startup**
 - cGMP Manufacturing Processes
 - Capital Equipment
 - Clean Utilities
 - Manufacturing Facilities
 - Automation and Computer Systems
- **Data Mining, Analysis, and Reporting**
- **Regulatory Submissions and Inspections**
- **Multi-Party Arrangements with CMOs, Contractors, and Suppliers**

Consistent with the principles of *IKT™*, Kymanox will do more than just get the job done – **we will share and transfer the knowledge** needed to do so. Thus, the ability to get things done will reside with the project team and not with one individual or organization.
